

FOR THE GUARANTEED REMOVAL OF LOCALIZED DRY SPOTS

**Maximum Water Conservation
and Drought Protection Technology**

FOURPlay™

• 76 % Hydretain® • 9.5 % SeaXtra™ • 4.5% Humate • 10% Non-ionic Surfactant

A unique blend of 4 proven technologies that maximize water efficiency within the soil matrix, improving water penetration and increasing nutrient availability while controlling and eliminating localized dry spots.

Application:

Existing Turf: Initial application - Apply 9 oz. of FourPlay diluted in a minimum of one gallon or more of water for each 1,000 sq. ft of turf (3 gallons of FourPlay per acre). Water-in thoroughly after application. Repeat monthly at 3 oz. of FourPlay diluted in one gallon or more of water for each 1,000 sq. ft of turf (1 gallon of FourPlay per acre). For best results apply to moist soil. Water in with at least 1/10 inch of water within the first hour to insure FourPlay is washed off foliage and into the soil. Within 24 hours, follow with enough additional water to carry FourPlay down to and throughout the root zone. (The amount of additional water required to carry FourPlay throughout the root zone is dependant on the depth of the root zone of the treated area. Usually 1/4 to 1/2 inch of water is required.) Additional FourPlay may be applied if necessary to correct extremely difficult localized dry spots.

Turf Establishment Including Sodding, Seeding and Sprigging: Apply FourPlay at the same rates as Existing Turf. For hydroseeding mix in hydroseeding tank at a rate of 9 ounces of FourPlay for each 1,000 square feet of hydroseeding area.

Trees, Shrubs & Individual Plants: Dilute FourPlay at a rate of 2 oz. per gallon of water and apply by drench thoroughly saturating the root zone. For maximum effectiveness on trees apply 4 to 8 ounces of concentrate for each inch of trunk diameter. Dilution rate is variable from 50:1 to 300:1.

Potted or Containerized Plants: Dilute FourPlay at a rate of 2 oz. per gallon of water and apply by drench, thoroughly saturating the planting media. Media should be dry enough to hold as much diluted FourPlay as possible. FourPlay may be applied through existing injectors at rates between 50:1 and 100:1. Higher dilution rates may require multiple applications to achieve desired results.

Large Planters & Gardens: Dilute FourPlay at a rate of 2 oz. per gallon of water or through injectors at a rate of 50:1 to 100:1 and apply at a rate of 2 ounces of concentrate per 60 sq. ft of area. One gallon treats 4,000 square feet.

For Best Results: Water thoroughly when re-watering FourPlay treated plants. FourPlay is biodegradable. For maximum effectiveness reapply monthly at a 1/3 rate or when required watering becomes more frequent. Reapply if a reduction in watering is not apparent within the first two weeks.

Warranty: Ecologel Solutions, LLC warrants that when used in accordance with label directions this product is reasonably fit for its intended purpose. Since method of application, weather, plant and soil conditions, mixture with other chemicals, etc. are beyond our control, there are no warranties or representations of any kind, express or implied, concerning this product. Ecologel Solutions, LLC is not liable for damages relating to the use or misuse of this product. The exclusive remedy against the Company for any cause of action relating to the handling or use of this product shall be limited to, at the Company's sole discretion, refunding of the purchase price paid by buyer or replacement of the product used.

For use on: Turf • Trees • Shrubs • Ornamentals • Flowers • Fruits • Vegetables

Made in the USA

Net Contents 2.5 US Gallon 9.46 Liters
